

ELB & ROUTE 53

The screenshot displays the AWS Management Console interface for creating an Auto Scaling group. The 'Review' step is selected, showing the following details:

Step 1: Choose launch template

Group details

- Auto Scaling group name: Demo-AutoScalingGroup
- Launch template: Demo-LaunchTemplate (lt-0767d4348048a3ebb)

Step 2: Choose instance launch options

Network

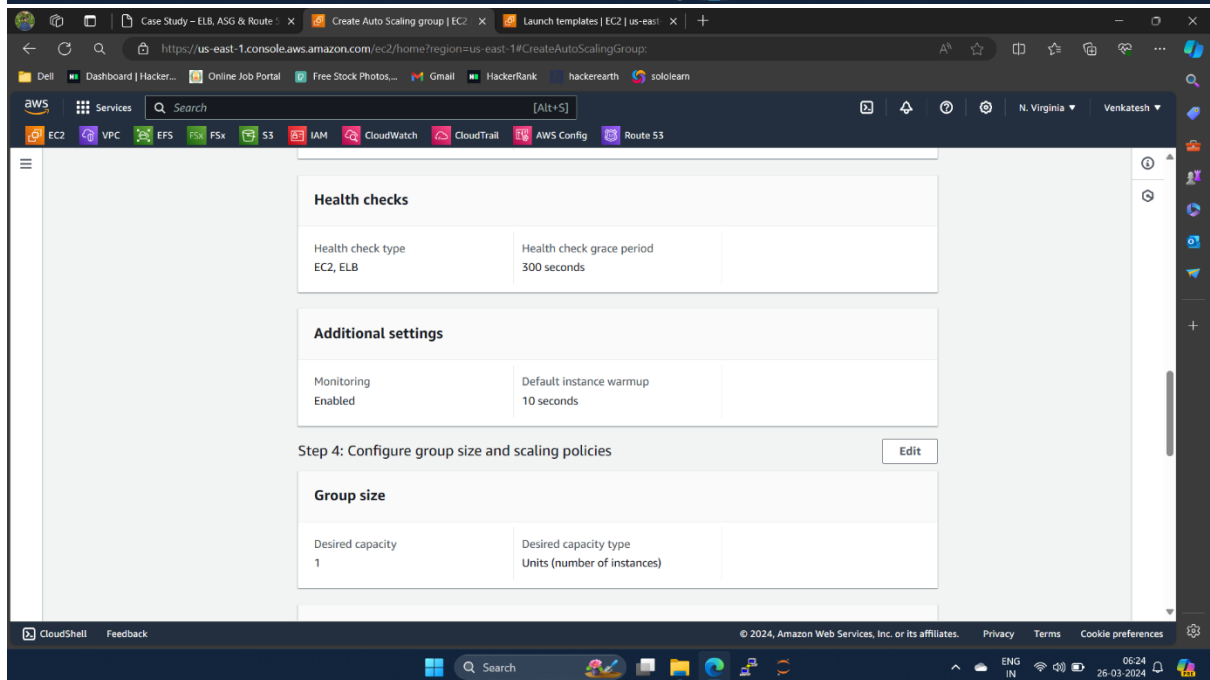

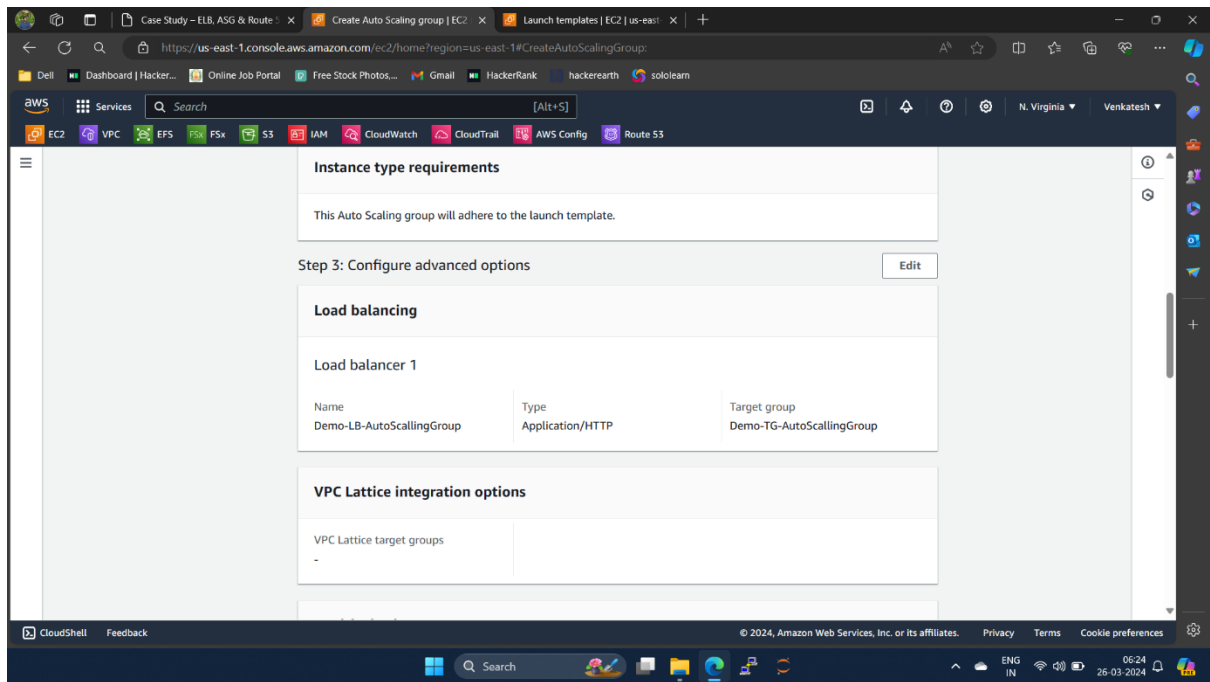

Network

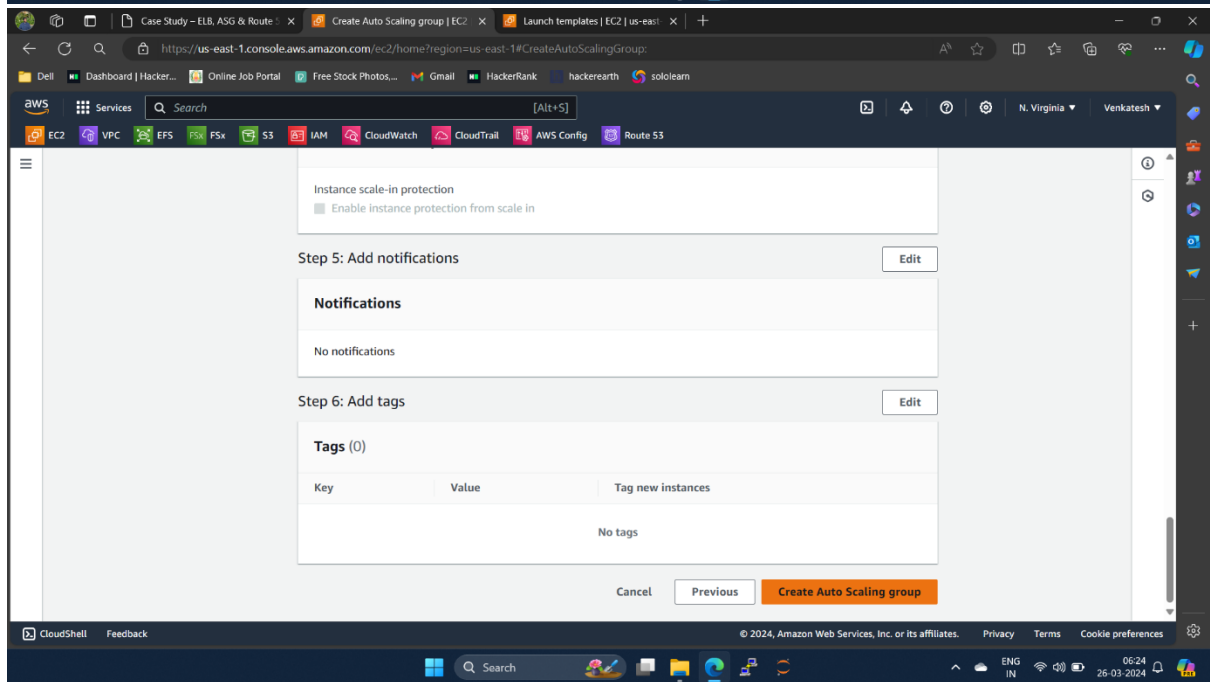

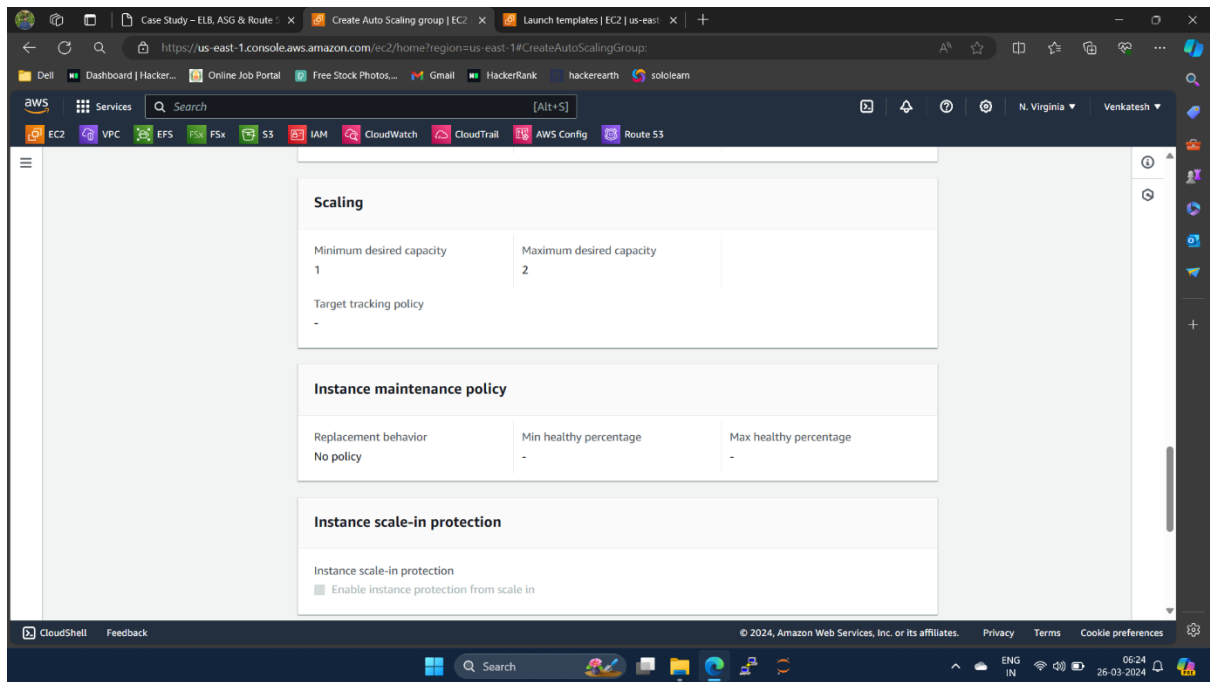

VPC: vpc-0fc0880ed88bd61b0

Go to route 53

- Click on hosted zone
- Create hosted zone
 - * Enter the domain name (venuss.com)
 - * Enter the description for the hosted zone
 - * Select public hosted zone in the TYPE option
 - * Click create hosted zone
- My hosted zone has created , i have selected it
- There i see 2 record presented already
- Now i am going to create a record for my hosted zone
- Click create record
 - * Record name - here i want to give the subdomain to my hosted zone name (**hello.venuss.com**){hello is my subdomain of my hosted zone}
 - * Record type - A
 - * **[** I have created an EC2 instance with some website running on it and i copy the public ip of my instance and i paste it]**
 - * Value - paste the public ip of the ec2 instance in this value space
 - * Click create record
- Now my record has been created
- Select that record
- I can see my record name [hello.venuss.com]
- Copy the record name and paste it on the browser
- It shows the website
